Family Data Web API Documentation

Adult

The Adult is sent back and forth as json.
The json format is seen in the example below:

```
{

    "JobTitle": "Tutor",

    "ID": 0,

    "FirstName": "Aryan",

    "LastName": "Gifford",

    "HairColor": "Black",

    "EyeColor": "Brown",

    "Age": 56,

    "Weight": 99.2,

    "Height": 172,

    "Sex": "M"

}
```

Api	Request	Sub-path	Description	Exceptions
api/Adults	**GET**		This will return a collection of Adults. Example: …api/Adults	May return 500 Internal Server Error, if something fails.
	PUT	**/post**	Use this to create a new Adult. Provide the Adult as json in the request body. Example: …api/Adults/post	May return 400 Bad Request, if the data is invalid. May return 500 Internal Server Error, if something fails when creating the adult.
	DELETE	**/{id:int}**	Use this to delete an Adult. Provide the id for the Adult to delete. Deletes all Adults with the same id. Example: ..api/Adults/{id:int}	May return 404 Bad Request, an Adult was not found with the provided id.
